Google Email Program

This app is using the Kivy GUI Python, it has three 3 files that makes it work. The main.py file will handle the UI of and the calculation through classes. The .ky file will essential like css but called KV Language, it handles all the design of the GUI as well takes the strings from the inputbox and sends it to the main.py file. The database file make sure there is not the same user as well as makes a file to store users. The email file handles the sending process.
